Art Unit: 1722

DETAILED ACTION

Priority

1. The cross reference on page 1 of the specification does not identify the relationship of the prior applications. The examiner suggest replacing the cross reference with the following:

--This application is the National Stage of PCT/AT2004/000199, filed on June 9, 2004, which claims the benefit of Austrian Patent Application No. A 897/2003, filed on June 10, 2003.--.

Specification

2. Applicant is reminded of the proper language and format for an abstract of the disclosure.

The abstract should be in narrative form and generally limited to a single paragraph on a separate sheet within the range of 50 to 150 words. It is important that the abstract not exceed 150 words in length since the space provided for the abstract on the computer tape used by the printer is limited. The form and legal phraseology often used in patent claims, such as "means" and "said," should be avoided. The abstract should describe the disclosure sufficiently to assist readers in deciding whether there is a need for consulting the full patent text for details.

The language should be clear and concise and should not repeat information given in the title. It should avoid using phrases which can be implied, such as, "The disclosure concerns," "The disclosure defined by this invention," "The disclosure describes," etc.

- The abstract of the disclosure is objected to because it exceeds 150 words.
 Correction is required. See MPEP § 608.01(b).
- 4. The disclosure is objected to because of the following informalities: the brief description of fig. 3 on p. 5 is incorrect. Fig. 3 is along line III-III of Fig. 2 (not Fig. 1).

 Appropriate correction is required.

Application/Control Number: 10/555,512

Art Unit: 1722

Claim Objections

5. Claim 6 is objected to under 37 CFR 1.75(c), as being of improper dependent form for failing to further limit the subject matter of a previous claim. Applicant is required to cancel the claim(s), or amend the claim(s) to place the claim(s) in proper dependent form, or rewrite the claim(s) in independent form.

Claim 6 recites that the molding bodies are into the receiving recess which is already claimed in claim 2 which recites that the sealing elements are received in the recess.

Claim Rejections - 35 USC § 112

- 6. The following is a quotation of the second paragraph of 35 U.S.C. 112:

 The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.
- 7. Claims 1-8 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Claims 1-8 include numbers in parenthesis which make the metes and bounds of the claims unclear.

Claim 1 recites "for sealing elements (12) which can be inserted" which is indefinite as to whether the sealing elements are being positively claimed. The examiner suggests changing "can be" therein to --are--.

Claim 1 recites "the connecting openings" which lacks antecedent basis making it unclear to what is being referred. The examiner suggests deleting "the" therein.

Application/Control Number: 10/555,512

Art Unit: 1722

Claim 4 recites "can carry inserts" which is indefinite as to whether the inserts are being positively claimed. The examiner suggests deleting "can" therein.

Claim 5 recites "can optionally be sealed by an insert" which is indefinite as to whether the insert is being positively claimed. The examiner suggests changing "can optionally be" therein to --is--.

Claim 6 is indefinite. Claim 6 appears to be missing a verb and/or other subject matter.

Claim 7 recites "a filling element can be inserted" which is indefinite as to whether the filling element is being positively claimed. The examiner suggests changing "can be" therein to --is--.

Allowable Subject Matter

- 8. Claims 1-8 would be allowable if rewritten or amended to overcome the rejection(s) under 35 U.S.C. 112, 2nd paragraph, and/or any objections, set forth in this Office action.
- 9. The following is a statement of reasons for the indication of allowable subject matter: the prior art of record does not teach or reasonably suggest the apparatus as recited by instant claims 1-8, particularly including the coolant bores extending transversally to the form nose and crossing its cooling channel, the cooling channel being open on both face sides, the cooling channel being connected via the continuous slot with the receiving recess for the sealing elements which are inserted from the open face sides and form the connecting openings for the flow connection between the cooling channel and the associated coolant bores, and the receiving recess penetrating

Application/Control Number: 10/555,512

Art Unit: 1722

the calibrating body in the direction of passage and extending into the region of the coolant bores.

Conclusion

- 10. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Purstinger (U.S. Patent 6,296,464), Kossl (U.S. Patent 6,682,330) and Kossl (U.S. Patent 6,814,559) are cited as of interest to show the state of the art.
- 11. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Joseph Leyson whose telephone number is (571) 272-5061. The examiner can normally be reached on M-F 9AM-5:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gupta Yogendra can be reached on (571) 272-1316. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
